

MO8 MDT System

Assistant Commissioner real-system feature log

Detailed overview using actual screenshots captured from the live protected MDT using the admin demo account.

Prepared for Assistant Commissioner / Gold Command consideration

Detailed feature and page log

This briefing uses real screenshots from the MDT. Each following page shows a system area, what it does, the key functions and why it matters operationally or administratively.

01	Secure Workstation Login	02	Application Selection Workspace	03	Personnel Dashboard
04	Global Search	05	Inbox and Notifications	06	Internal Chat
07	My Profile	08	Tasks	09	Calendar
10	Timeline	11	Shift Log	12	Supervisor Dashboard
13	Officer Records	14	Officer Development	15	Rank Change Log
16	Discipline	17	Leave of Absence	18	Handovers
19	Courses	20	Training Matrix	21	Documents
22	Notice Board	23	Recruitment Administration	24	Reports
25	Users	26	Permissions	27	Audit Log
28	Data Quality	29	Settings and View-As Simulator	30	Live CAD
31	Units and Callsigns	32	Control Room	33	Operational Comms
34	Operational Work Queue	35	Casework	36	Scheduled Deployments
37	Operational Intel	38	Legal Reference	39	CAD Archive
40	CAD Performance	41	Supervisor Sign-Off	42	Public Careers Portal

Secure Workstation Login

The MDT uses a secure workstation-style login rather than a normal website landing page. After authentication, the account is linked to rank, role, permissions and the officer profile.

Main functions

- Username/password login for authorised MDT users.
- Profile, rank and permission loading after sign-in.
- Workstation styling supports the roleplay MDT feel.
- Public careers access remains separate from internal tools.

Practical use

Creates a more professional and immersive entry point while still protecting operational and personnel records.

Application Selection Workspace

After login, officers choose the area of the system they need rather than being pushed into one dashboard. This separates administration, CAD/Operations, documents, messaging and careers.

Main functions

- Personnel Hub for records and management.
- CAD/Operations for live operational roleplay.
- Quick access icons for chat, documents and careers.
- Keeps public recruitment clearly separate from staff systems.

Practical use

Makes the system feel like a secure internal computer with separate operational applications.

Personnel Dashboard

The Personnel Dashboard gives command and supervisors an at-a-glance view of outstanding work, activity, notices and current team position.

Main functions

- Dashboard widgets for activity, tasks and standards.
- Task counters and priority queue.
- Notice board and calendar highlights.
- Live personnel status and quick navigation.

Practical use

Provides command visibility without needing to open several separate sheets or Discord channels.

Global Search

Global Search allows authorised users to search across records from one place, with preview-first behaviour before opening a full page.

Main functions

- Searches officers, CADs, cases, documents, AIPs and recruitment records.
- Preview popups avoid unnecessary navigation.
- Useful for command checks and quick record lookup.
- Supports linked record navigation.

Practical use

Reduces admin friction and makes the MDT usable as records grow.

Inbox and Notifications

Inbox and Notifications

The Inbox combines notifications, assigned actions, document acknowledgements and important system updates.

Main functions

- Unread notification indicators.
- Priority colouring for positive, negative and pending decisions.
- Notifications for LOA, courses, supervisors, calendar events and profile changes.
- Supports Discord alert integration where configured.

Practical use

Keeps officers informed without relying entirely on Discord messages.

Internal Chat

The internal chat feature provides a Teams-style communication layer for direct and group messages inside the MDT.

Main functions

- Direct conversations and group-style messaging.
- Unread message indicators.
- Useful for supervisor contact and operational follow-up.
- Keeps relevant communication inside the system.

Practical use

Adds controlled communication without needing every internal discussion to happen externally.

My Profile

Each officer can view their own record, including relevant training, activity, supervisor information, tasks, requests and personal history.

Main functions

- Officer self-service profile view.
- Own discipline, LOA and activity visibility where appropriate.
- Request links for leave, transfer and other actions.
- Supervisor and training context.

Practical use

Gives every officer a clear personal portal rather than making the system command-only.

Tasks

Tasks route approvals, reviews, signatures and amendments to the correct officers, while still allowing authorised users to review wider queues.

Main functions

- My Tasks first, wider queues by permission.
- LOA, transfer, course, AIP and CAD review tasks.
- Clear outstanding task counters.
- Tasks can open the relevant action or be cleared with a reason.

Practical use

Prevents approvals and reviews from being forgotten or buried in messages.

Calendar

The calendar shows scheduled activity such as training courses, LOA, meetings and assigned events in month/week/day style views.

Main functions

- Month, week and day calendar views.
- Events can target officers, ranks, tags or supervisees.
- LOA and course bookings appear as calendar items.
- Calendar event notifications can be sent to relevant officers.

Practical use

Improves forward planning and makes upcoming obligations visible.

Timeline

The timeline feature helps users view the history of a specific officer, CAD, vehicle, person, case or other record.

Main functions

- Search for an entity and view its timeline.
- Tracks changes, events and linked actions.
- Useful for command review and investigation history.
- Avoids one massive system-wide timeline.

Practical use

Makes record history clearer and easier to audit.

Shift Log

Shift logging records officer activity and provides a supervisor review mechanism for attendance, activity and debriefs.

Main functions

- Start/end shift control.
- On-duty status linked to CAD/Operations.
- Retrospective shift requests.
- Supervisor activity review by date range.

Practical use

Supports fair activity monitoring and reliable attendance records.

Supervisor Dashboard

The supervisor area gives line managers responsibility for assigned officers, requests, activity reviews and development work.

Main functions

- Assigned officer list.
- Supervisor workload and unassigned officer visibility.
- Development plans and check-ins.
- Tasks from supervisees are highlighted.

Practical use

Creates a genuine line-management structure inside the roleplay unit.

Officer Records

The officer records page is the main personnel database, linking officer profiles, user accounts, supervisors, ranks, callsigns, tags and current status.

Main functions

- Add, edit and delete/archive officers and linked users.
- Rank, callsign, supervisor and tag management.
- Clickable officer profiles.
- Linked CAD and activity records.

Practical use

Provides a single reliable source for MO8 officer information.

Officer Development

The development section handles probation records, performance reviews, restrictions, development plans and related supervisor actions.

Main functions

- Probation records and review stages.
- Performance review tracking.
- Restrictions with custom type support.
- Incomplete reviews can create supervisor tasks.

Practical use

Supports structured officer progression and intervention.

Rank Change Log

The rank log records promotions and rank changes with previous rank, new rank, reason and authorising officer.

Main functions

- Promotion/rank history.
- Reason and authorising officer capture.
- Supports transparency around rank decisions.
- Links back to officer records.

Practical use

Creates a clear audit trail for promotions and demotions.

Discipline

Disciplinary actions can be recorded, updated, viewed against officer profiles and notified to the relevant officer.

Main functions

- Add, edit and delete/clear discipline records.
- Officer self-visibility where appropriate.
- Important notifications for new discipline.
- Links to profile history.

Practical use

Improves consistency and accountability for conduct records.

Leave of Absence

LOA requests can be submitted by all ranks and approved or denied by authorised supervisors, with reasons and notifications.

Main functions

- All ranks can request LOA.
- Sergeant+ approval flow.
- Denial reason capture.
- Active LOA appears in shift/activity review and calendar.

Practical use

Makes absence management transparent and traceable.

Handovers

Handovers allow information to be passed to selected officers, groups or command users with proper visibility and later deletion/archive controls.

Main functions

- Create and send handovers to selected officers.
- Multi-select recipients.
- Delete/archive old handovers.
- Useful for continuity between patrols or supervisors.

Practical use

Improves continuity without relying on informal notes.

Courses

The courses system turns training into bookable sessions with trainers, co-trainers, attendee requests and pass/fail outcomes.

Main functions

- Create training sessions with duration and date/time.
- Seat requests reviewed by trainers.
- Approve, deny, waitlist and pass/fail workflows.
- Successful completion can update training records.

Practical use

Makes training delivery more organised and measurable.

Training Matrix

The training matrix provides a compact, spreadsheet-style view of officer training and driving standards.

Main functions

- Toggle qualifications such as Taser, MOE, Blue Ticket and Motorbike.
- Dropdown driving standard selection.
- Searchable officer list.
- Command-managed training options.

Practical use

Makes training status easy to review across a large team.

Documents

The documents hub works like a restricted file explorer for policy, training guides, operational guidance and other internal files.

Main functions

- Folders and subfolders.
- Rank, role and tag restrictions.
- Physical file upload through storage.
- Acknowledgement tracking for required documents.

Practical use

Keeps guidance organised and access-controlled.

Notice Board

The notice board allows command to publish announcements, operational updates and key changes to the team.

Main functions

- Create and manage announcements.
- Command updates visible from dashboard.
- Useful for policy, training and operational changes.
- Can link with notifications.

Practical use

Provides a clear place for official internal communication.

Recruitment Administration

Recruitment administration lets authorised users create vacancies, define application forms and review applications by vacancy.

Main functions

- Internal and external vacancies.
- Custom and preset application questions.
- Reviewer access by selected officers.
- Grouped application queues by vacancy.

Practical use

Supports structured recruitment while keeping applications manageable.

Reports

The reports area provides management reporting across personnel and operational data.

Main functions

- Activity and team summaries.
- Training and workload views.
- Management information for command review.
- Supports future dashboard reporting expansion.

Practical use

Turns stored MDT data into useful command insight.

Users

The users page manages MDT accounts, linked officer records, passwords, access status and account lifecycle actions.

Main functions

- Create linked officer/user accounts.
- Reset or change passwords.
- Delete/archive linked users and officers.
- Account request approval workflow.

Practical use

Keeps access management inside the MDT rather than manual database edits.

Permissions

Permissions allow access to be managed by rank, role and specific user overrides.

Main functions

- Rank permission editor.
- Specific officer/user permission overrides.
- Full access allow/deny control.
- Command can audit how access is applied.

Practical use

Allows the MDT to scale without every user seeing command-only tools.

Audit Log

Audit logs record important actions and sensitive changes, including deletion, archive and permission decisions.

Main functions

- Sensitive action history.
- Deletion/archive traceability.
- Permission and record change logging.
- Supports anti-corruption and accountability checks.

admin 17:59

Practical use

Protects confidence in the system by making key actions traceable.

Data Quality

The data quality page highlights gaps, risks and inconsistencies that command or supervisors may need to resolve.

Main functions

- Missing supervisors or profile links.
- Inactive officers or shift concerns.
- Training and record gaps.
- Can feed into supervisor tasks.

Practical use

Helps command keep the system accurate rather than letting data decay.

Settings and View-As Simulator

Settings and View-As Simulator

Settings includes wider command configuration and a simulator to view the MDT as different ranks, roles, tags or training combinations.

Main functions

- Command access preview simulator.
- Design and workspace preferences.
- System configuration tools.
- Useful for testing permission changes.

Practical use

Lets command safely test what different officers can see and do.

Live CAD

Live CAD is the operational dispatch workspace for incidents, active units, logs and command information.

Main functions

- Create and select active CADs.
- Incident workspace with logs, links and assignments.
- Live units and briefing/context panels.
- Operational archive after closure.

Practical use

Provides a distinct operational MDT experience for live patrols.

Units and Callsigns

The units page manages callsigns, crews, vehicles, status and officer capabilities.

Main functions

- Create or join units/callsigns.
- Preset callsign board.
- Crew qualifications displayed from training records.
- Jobs assigned to callsigns rather than just individuals.

Practical use

Improves realism and makes CAD tasking easier.

Control Room

The control room gives dispatchers/controllers a management view for live callsigns, incidents and officer lookup.

Main functions

- Book on as controller.
- Live callsign and incident tables.
- Officer lookup by rank, callsign or capability.
- Controller event log.

Practical use

Supports a dedicated dispatcher role and a clearer live control workflow.

Operational Comms

Operational comms retain structured radio/dispatch messages against channels, units and CAD records.

Main functions

- Live operational traffic feed.
- Channels and CAD context.
- Messages linked to incidents/units where relevant.
- Useful for dispatch record keeping.

Practical use

Adds realism and creates a record of operational communication.

Operational Work Queue

The work queue shows incomplete operational records, case actions, data quality issues and amendments requiring attention.

Main functions

- Outstanding CAD/case actions.
- Review and amendment tasks.
- Search and filter by status.
- Links to personnel task system where relevant.

Practical use

Keeps operational follow-up visible after live incidents end.

Casework

Casework groups repeated incidents, evidence, persons, vehicles and outcomes into larger files.

Main functions

- Create and manage cases.
- Link CADs, entities and evidence.
- Archive/delete cases with audit controls.
- Supports repeat offender or complex incident tracking.

Practical use

Lets the unit build a bigger picture beyond single CADs.

Scheduled Deployments

Deployments support planned operations and forward planning.

Main functions

- Create scheduled deployments.
- Assign officers or units.
- Link to operational briefings.
- Useful for planned patrols or events.

Practical use

Adds planning structure to larger roleplay operations.

Operational Intel

Intel combines people, vehicles, warnings, BOLOs, cases, operations and location intelligence.

Main functions

- Search persons and vehicles.
- View active BOLOs and warnings.
- Link entities to CADs and cases.
- Highlight recent repeat activity.

Practical use

Helps officers make informed decisions during stops and incidents.

Legal Reference

The legal reference area lets officers search offences, powers and guidance relevant to roleplay enforcement.

Main functions

- Search offences by title, code or keyword.
- Offence guidance including FPN/arrest advice.
- Police powers guidance for searches, detentions and seizures.
- Supports outcome reporting.

Practical use

Improves consistency and quality of officer decision-making.

CAD Archive

The archive provides searchable historical access to previous CAD incidents.

Main functions

- Search by reference, location, unit, officer, outcome or keyword.
- Date and incident type filters.
- Links archived CADs to officers, vehicles and cases.
- Supports supervisor review and intelligence checks.

Practical use

Preserves operational history in a usable format.

CAD Performance

CAD performance analytics show operational activity and trends.

Main functions

- Operational performance summaries.
- Incident activity trends.
- Officer/unit contribution insight.
- Can support shift debriefs and command reviews.

Practical use

Turns CAD activity into measurable operational insight.

Supervisor Sign-Off

Supervisor sign-off allows incidents and officer actions to be approved, returned or reviewed after closure.

Main functions

- Review complete incident records.
- Approve or return to officer with amendments.
- Tasks routed to supervisors or involved officers.
- Supports incident templates and QA.

Practical use

Creates quality assurance for operational records and officer outcomes.

Public Careers Portal

The public careers portal lets applicants view vacancies and apply without seeing internal MDT or CAD content.

Main functions

- Public vacancy listing.
- Applicant account/application tracking.
- Internal and external job postings.
- Discord/status update support.

Practical use

Supports recruitment with a professional public-facing route.

The screenshot displays the 'Public Careers Portal' interface. At the top, a dark navigation bar contains the 'MO8 Careers' logo (Metropolitan Operations 8) and three menu items: 'Vacancies' (highlighted), 'My applications', and 'Staff MDT'. Below the navigation bar, the main content area is titled 'RECRUITMENT' and 'Apply now'. It includes a subtext: 'Search current internal and external opportunities within Metropolitan Operations 8.' A search filter section is present with the label 'Filter on keywords' and a text input field containing 'Title, team or keyword'. A blue 'Search' button is to the right of the input field. Below the search bar, it states '0 results matched' and shows a message box: 'No current vacancies match your search.' The footer of the interface contains 'MO8 Roleplay Community' on the left and 'Recruitment data is used only to assess roleplay applications.' on the right.

Creating a CAD with traffic-stop data

This screenshot is from the live MDT form populated with demonstration data. It shows how a CAD can collect normal incident information, traffic-stop data, required capabilities, linked incidents and command/closure details from the same workflow.

- Core CAD fields: title, type, priority, status, location, beat, radio channel and description.
- Traffic-stop fields: registration plate, driver/person dealt with, stop reason and vehicle description.
- Operational deployment fields: required capabilities and linked incident search.
- Command and closure fields: incident commander, Bronze/Silver/Gold command and outcome notes.

Why this matters

The CAD workflow encourages officers to record the details needed for later review, intelligence checks, supervisor sign-off and potential CID package export.

The screenshot displays the 'Operations Hub' interface, which is a live MDT form. The main section is titled 'CONTROL / CAD' and includes a search bar for 'Search MDT'. Below this, there are tabs for 'LIVE CAD', 'UNITS', and 'CONTROL ROOM'. The 'LIVE CAD' tab is active, showing a list of 'Active Incidents'. A search bar for 'Search active CAD' is present, along with filters for 'All priorities' and 'All queues'. A message states 'No matching active incidents'.

The right sidebar contains several sections:

- Capabilities:** A list of checkboxes for 'Motorbike', 'Basic', 'Response' (checked), 'IPF', 'Advanced' (checked), 'Advanced + TPAC' (checked), 'Supervisor' (checked), and 'Roads Crime Team'.
- ASSIGNED UNITS:** A section for assigning units to the incident.
- LINKED INCIDENTS:** A section for linking related incidents, with a search bar for 'Search CAD number, title, date, location or status'. It lists several incidents with their IDs, titles, and statuses.

The bottom of the interface shows a 'PERSONAL' section with a 'New unit' button and a 'my status' dropdown menu. The top right corner has buttons for 'Switch hub' and 'Logout'.

MO8 CAD Workflow Addendum

Operational process, offence guidance, tasking and CID package workflows

Prepared for Assistant Commissioner / Gold Command consideration

End-to-end operational workflow

The CAD side is designed to move an incident from live deployment through structured logging, legal/offence guidance, supervisor quality assurance, intelligence building and, where required, a CID-ready export package.

Example traffic stop data path

Live CAD creation and incident handling

Live CAD is the main dispatch queue. It is where controllers or officers create incidents, assign units and retain the live operational log.

Workflow

- 1 A CAD is created with a reference, type, priority, location and initial narrative.
- 2 Available callsigns or units are assigned, not just individual officers.
- 3 Log entries, linked entities, outcomes, evidence and notes are retained against the CAD.
- 4 When closed, the incident can enter supervisor sign-off or archive depending on the workflow.

Why it matters

The incident becomes a full record, not just a temporary dispatch note.

Example

CAD-104 / Traffic stop / RP-20 assigned / supervisor review required.

Units, callsigns and controller workflow

Officers on shift form callsigns or units before they are assigned work. This supports double-crewing and capability-aware deployment.

Workflow

- 1 Officer starts a shift, then books onto a callsign or requests to join one.
- 2 The unit shows crew, vehicle, status and capabilities drawn from training records.
- 3 Controllers can view and update the roster, status and assignments.
- 4 CAD jobs are assigned to the callsign so the whole crew is linked to the incident.

Capability example

If one crew member has Taser and another has Advanced driving, the unit shows those capabilities.

Controller value

Control can see who is free, deployed, committed or off duty.

Person and vehicle intelligence workflow

The Intel page links CADs to people, vehicles, warnings, BOLOs, cases and previous outcomes. This is where repeat patterns become visible.

Workflow

- 1 Officer searches a person or registration plate.
- 2 The system should surface existing records before allowing a duplicate to be created.
- 3 Recent same-day CAD links, FPNs, arrests and warnings are highlighted.
- 4 The officer can open the linked CAD or add the entity to the current incident.

Repeat offender flag

Example: AB12 CDE linked to one earlier speeding warning today - officer should consider escalation.

Data value

Repeat behaviour becomes visible during the stop, not weeks later in a review.

Adding offences and guided outcomes

When an officer records an offence, the MDT is intended to guide them through the decision rather than just storing a label. The search prioritises the offence title, then shows code, guidance, FPN values, arrestability and any escalation notes.

- Officer searches by offence name, such as Dangerous Driving, not by long code first.
- Multiple offences can be selected for the same person or vehicle.
- Fine values and suggested arrest timings are pre-filled where available.
- Guidance explains criteria for higher fines, arrest/discretion and repeat-offender handling.
- The officer is prompted to add grounds and reasoning for serious outcomes, but the workflow should not block submission unnecessarily.

Example selected offences

- OFFENCE Dangerous Driving - ROAD-003 - arrestable at officer discretion
- FPN Suggested FPN: example amount from offence library
- TIME Suggested arrest time: example timing from guidance
- NOTE Repeat speeding warning today: escalation recommended

Recording powers, searches, seizures and force

The CAD workflow can also record use of powers or force. This is separate from offences: it records what legal power or operational power was used, against whom or what, and why.

- Officer chooses the person or vehicle linked to the CAD.
- Officer selects the relevant power, such as a search, detainment or seizure power.
- The MDT displays guidance explaining when the power should be used.
- Grounds, reasoning and result fields are encouraged so supervisors can review the decision.
- Serious uses of power can be routed to supervisor sign-off as a task.

Example power log

POWER	PACE Section 10 - search of detained person
SUBJECT	John Doe / linked to CAD-104
GROUND	Smell of controlled item after traffic stop
REVIEW	Supervisor review required due to search/seizure

Legal reference search

The legal reference page is a searchable knowledge base for offences and police powers. It gives officers quick access to the guidance needed during a live CAD.

Workflow

- 1 Search by offence/power title, section, code or keyword.
- 2 Filter between offences and police powers.
- 3 View guidance, FPN or arrest advice and criteria.
- 4 Use the reference when adding outcomes or power logs to a CAD.

Example search

Searching dangerous should prioritise Dangerous Driving before showing the code.

Officer support

This helps officers use the correct offence or power during roleplay.

Flagging repeat offenders during the same day

When a person or vehicle is linked to a CAD, the system can show whether they have already been dealt with recently. This is especially useful for traffic stops where a previous warning may mean the next outcome should be a fine or stronger action.

- Officer enters a registration plate or person name.
- Existing records are checked before creating a new person/vehicle.
- Recent CADs from the same day are shown with key outcome information.
- The warning explains the previous action, such as speeding warning issued at 18:20.
- Officer can open the previous CAD before deciding the new outcome.

Example same-day alert

VEHICLE

AB12 CDE linked to CAD-092 today at 18:20

OUTCOME

Speeding warning already issued by RP-23

GUIDANCE

Do not warn again for the same behaviour - consider FPN

LINK

Open CAD-092 for full previous notes

Evidence, cases and CID package preparation

Casework and evidence tools allow CADs to be built into a more complete file when an incident or repeat behaviour requires escalation.

Workflow

- 1 Create or select a case.
- 2 Link CAD references, people, vehicles, offences, outcomes and evidence.
- 3 Upload evidence and retain file metadata/integrity information.
- 4 Generate a CID-ready PDF pack with references, officer details, summary, evidence and signature.

When used

Repeat offenders, serious incidents, complex evidence or referral to CID-style teams.

Output

A clear PDF package can be downloaded and sent directly.

CID package example

The CID export is intended to produce a plain, professional pack containing the key references and evidence in a format that can be sent onwards. The example below shows the type of information that would be included.

- Source CAD and case references.
- Officer details and digital signature.
- Linked persons, vehicles, offences and outcome records.
- Evidence list, attachment notes and integrity/hash records.
- Executive summary and requested action.

CID REFERRAL PACKAGE

Reference: CID-2026-004 / Source CAD: CAD-104

Submitting officer: Inspector admin / Callsign RP-20

Classification: Repeat traffic offending / evidence review

Linked vehicle: AB12 CDE / Linked person: John Doe

Suspected offences: Dangerous Driving, Speeding

Outcome history: Warning issued earlier same day; FPN recommended

Evidence: 2 screenshots, 1 bodycam link, 3 CAD log extracts

Integrity: SHA-256 hashes stored in MDT export record

Requested action: CID review for case file escalation

Digital signature captured at export

Supervisor sign-off and amendment workflow

Supervisor sign-off provides quality assurance for completed CADs and officer actions. A reviewer can approve the record or return it for amendment.

Workflow

- 1 Incident is closed or an officer action is submitted.
- 2 The relevant supervisor receives a task or highlighted review item.
- 3 Supervisor reviews CAD details, log entries, outcomes, powers and evidence.
- 4 Supervisor either signs off or returns the record with required amendments.
- 5 Returned work becomes a task for the officer to correct and resubmit.

Task integration

Supervisor reviews are visible in both operational queues and the Personnel task system.

Quality assurance

Ensures serious actions have enough explanation before final archive.

How operational tasks and Discord alerts work together

The MDT task system is the authoritative record. Discord DMs act as an alerting layer so officers know something requires action, but the actual decision or review still happens inside the MDT.

- A task is created when an action requires a decision, signature, review or amendment.
- The task appears in My Tasks for the relevant officer or supervisor.
- The Discord bot can send a DM with the task summary and a link to open the MDT.
- Colour-coded embeds can show normal, positive, pending, negative or urgent alerts.
- Completing the MDT task clears or updates the item and creates an audit trail.

Example Discord DM embed

BLUE

New CAD review assigned - CAD-104 awaiting supervisor sign-off

AMBER

Course request waitlisted - applicant has been informed

RED

CAD returned for amendment - add grounds for search power

GREEN

LOA approved - 12/07/2026 to 16/07/2026

Worked example: repeat speeding stop

This example shows how the CAD workflow would operate during a traffic stop where the same vehicle has already been warned earlier in the day.

Operational value of the CAD workflows

The CAD system is not just a dispatch board. It creates a structured operational record from the moment a CAD is opened through to review, intelligence, evidence and escalation.

For officers: clearer workflows, guided legal/offence references, better prompts for outcomes and powers.

For supervisors: review queues, returned amendments, quality assurance and visibility of officer decision-making.

For controllers: unit status, callsign management, live CAD queue and dispatch event history.

For command: searchable archives, repeat-offender intelligence, evidence integrity, CID-ready exports and auditable decisions.
